Bougie Cap

A new method for the bougienage/dilation of stenoses and strictures in the upper gastrointestinal tract.

The BougieCap allows direct visual control during the bougienage. The tension on the tissue is visible while passing the stenosis with the cap, thereby avoiding overstretching.

Moreover, the procedure time is reduced due to less instrument change. The evaluation can be done directly after the bougienage thanks to the attached transparent cap.

Caps are available in 8 sizes (Ø 7-8-10-12-14-16-18-20 mm) and it will be attached onto the endoscope.

The distal end of the cap has three holes: two of them (lateral) for air insufflation and suction and one (center) for the insertion of a guide wire.

Application

Esophageal stenosis

Schematic

Guiding the endoscope with the attached BougieCap up to the stenosis.

Carefully sliding the endoscope through the stenosis using gentle rotations under visual control.

Successful passage of the scope through the stenosis.

Clinical example* (BougieCap used Ø 12–16 mm)
